The two clocks, eight issuers

FundamentalQuantmental, HY Analyst, methodology Section 4.7

Filings as known on 18 September 2026

How to read this. Each page puts what the issuer owes each year (rent, debt, interest, purchase commitments) against what pays for it. Two issuers disclose a large signed contract book (CRWV, ORCL): their green line is contract cash. The others do not: their green line is today's EBITDAR held flat. That line is not a promise; it asks how much of today's earnings the fixed charges take.

The one number to compare across all eight: fixed charges in years of today's EBITDAR. HCA needs 3.8 years; CRWV needs 18.2.

Issuer	Fixed charges	Centre (years)	Years of EBITDAR	Breakeven margin	Renewal-dependent
CRWV	$106bn	5.5	18.2	1.03	31%
ORCL	$549bn	8.2	13.9	0.83	37%
HCA	$59bn	4.4	3.8	–	–
THC	$18bn	3.3	4.2	–	–
CCL	$51bn	4.7	6.9	–	–
NCLH	$18bn	5.6	6.5	–	–
MGM	$59bn	12.2	12.5	–	–
WYNN	$17bn	5.9	9.3	–	–

Changes against the first CoreWeave and Oracle note. This run derives every input from the filings. CoreWeave's interest rate is the cash rate from the loader (4%) instead of the hand-entered 9%, and its contract timing comes from the 10-Q text (months 25 to 48, then 49 to 78). Its breakeven margin moves from 1.08 to 1.03 and its renewal-dependent share from 24% to 31%.

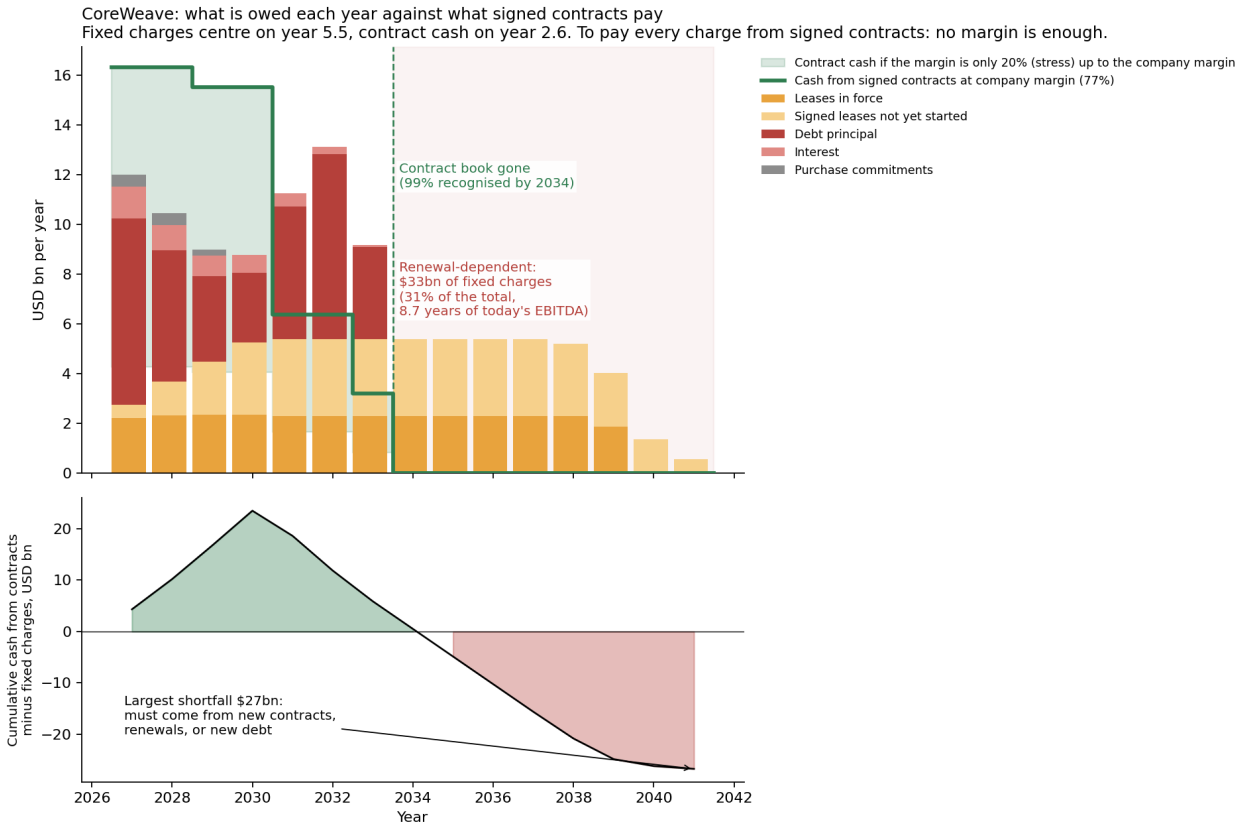

Fallbacks used. HCA tags a debt schedule that is short of its balance-sheet debt; the missing amount is put in "thereafter". Tenet discloses signed revenue below one year of sales, so its contract clock is treated as immaterial. Leases that run past 25 years are summed into the last bar, which is hatched.

The macro paths behind every scenario page

Phase expansion (from the F6 indicators with data). Sources: SPF, FOMC SEP, Treasury forwards, TRACE high yield level (168 bp).

Path	Probability	GDP (avg)	Policy rate, 2 years	10y yield, 2 years	HY spread (bp)
soft landing	86%	2.5%	3.9%	5.2%	142
recession	2%	-0.0%	2.6%	3.0%	369
higher for longer	8%	2.2%	5.5%	5.9%	168
disinflation rally	4%	2.8%	2.1%	4.6%	110
stagflation	0%	-0.1%	4.4%	3.9%	376

1 CoreWeave (CRWV), filing of 2026-06-30

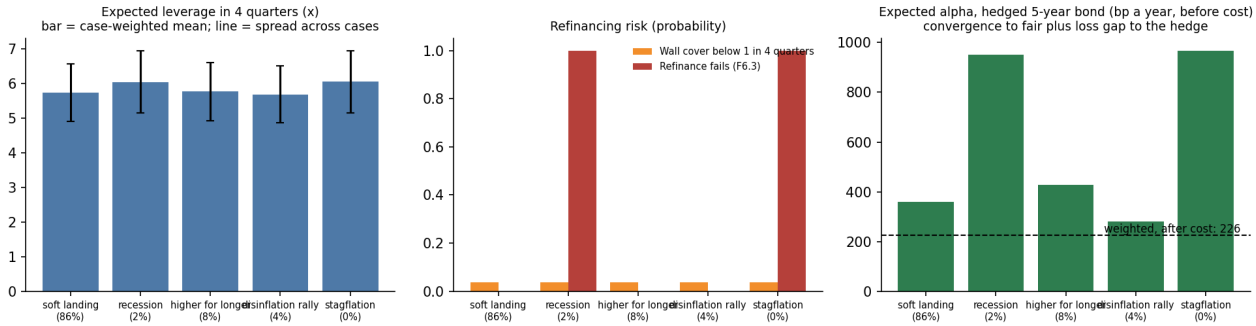

Source: CoreWeave SEC filings as of 2026-06-30 (XBRL), hy/clocks.py. Assumptions listed in the write-up.

- **Fixed charges:** $106bn, centred on year 5.5. That is 18.2 years of today's EBITDAR.
- **Signed contracts:** $104bn. Breakeven margin 1.03 (no margin is enough).
- **Renewal bet:** 31
- **Debt schedule:** ladder as filed; balance-sheet debt 35,551 (tag DebtInstrumentCarrying-Amount).

CoreWeave (CRWV): scenarios under each macro path

CoreWeave (CRWV) under each macro path; archetype A5, phase expansion

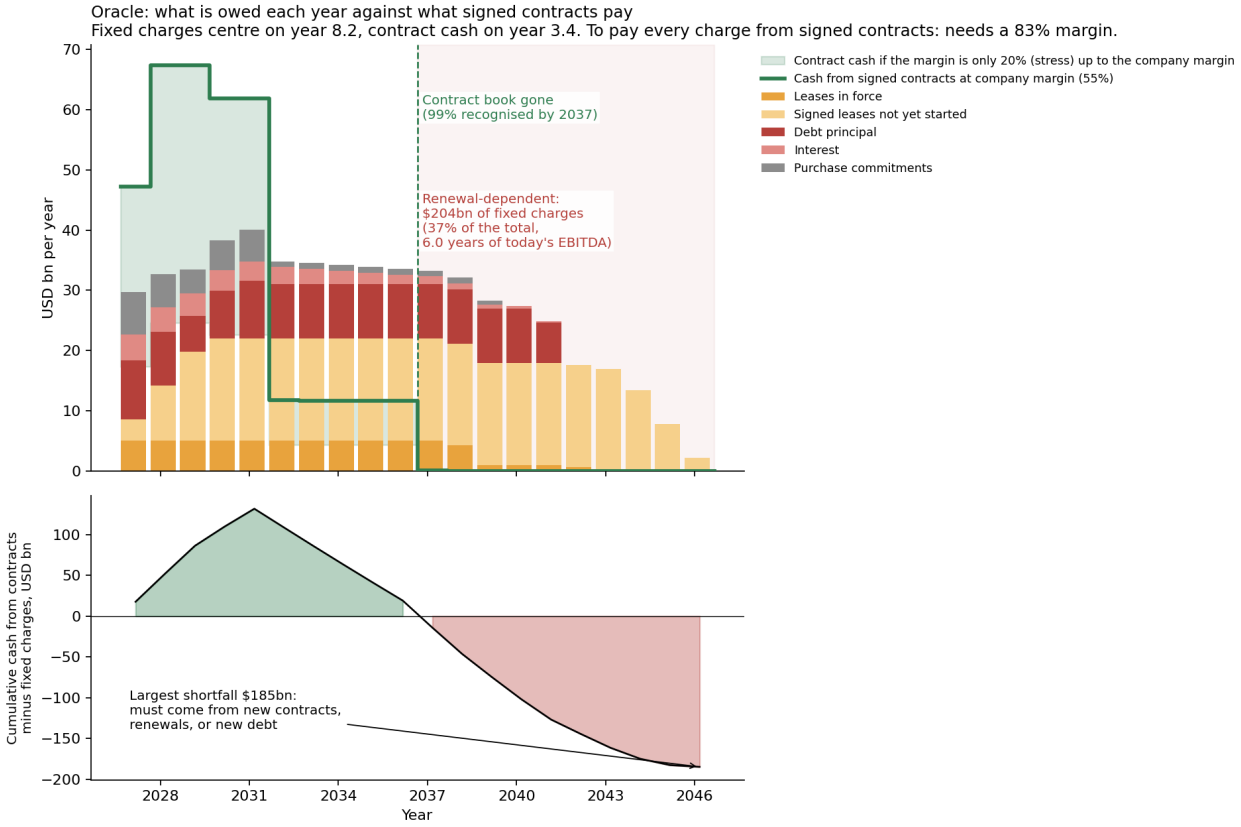

Paths: SPF, FOMC SEP, Treasury forwards, TRACE HY level. v0 rules for fair spread, PD, refi access: docs/decisions/2026-10-22-issuer-scenario-defaults.md

Path	Prob.	Lev. 4q	Peak lev. (down)	F4 score	Wall risk	Refi fails	PD 12m	Alpha (bp/yr)
soft landing	86%	5.7x	9.3x	3	4%	0%	4.0%	+361
recession	2%	6.0x	9.9x	1	4%	100%	10.0%	+951
higher for longer	8%	5.8x	9.3x	2	4%	0%	4.7%	+428
disinflation rally	4%	5.7x	9.3x	3	4%	0%	3.1%	+280
stagflation	0%	6.1x	9.9x	1	4%	100%	10.2%	+968

- **Weighted expected alpha**, hedged 5-year bond, 6-month horizon: +376 bp a year before cost, +226 bp after a 20 bp bid-ask round trip. Framework F9 G3 (alpha after cost above zero): passes.
- **Inputs**: archetype A5; 5-year spread 739 bp against a fair 574 bp (pair report fair line); starting growth 8.0% a quarter; 10,597 of 35,551 (USD m) of debt due inside 8 quarters. F4 points held on every path: recent raise.
- **Read with care**: fair spread, default probability, and refinance access follow the v0 rules of `docs/decisions/2026-10-22-issuer-scenario-defaults.md`. Under spread-proportional pricing a mispricing scales with the market, so the stress paths enlarge it; real stress often widens a gap before it closes.

2 Oracle (ORCL), filing of 2026-08-31

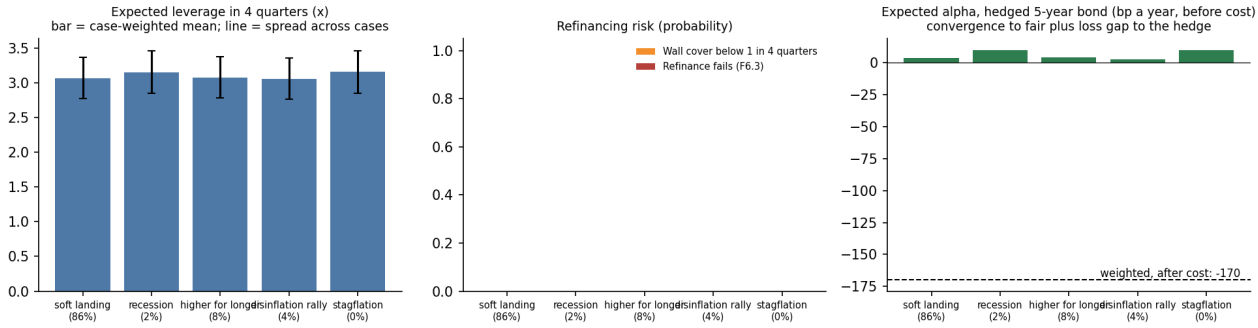

Source: Oracle SEC filings as of 2026-08-31 (XBRL), hy/clocks.py. Assumptions listed in the write-up.

- **Fixed charges:** $549bn, centred on year 8.2. That is 13.9 years of today's EBITDAR.
- **Signed contracts:** $664bn. Breakeven margin 0.83 against a company margin of 55
- **Renewal bet:** 37
- **Debt schedule:** ladder as filed; balance-sheet debt 125,337 (tags NotesPayableCurrent + LongTermNotesAndLoans).

Oracle (ORCL): scenarios under each macro path

Oracle (ORCL) under each macro path; archetype A6, phase expansion

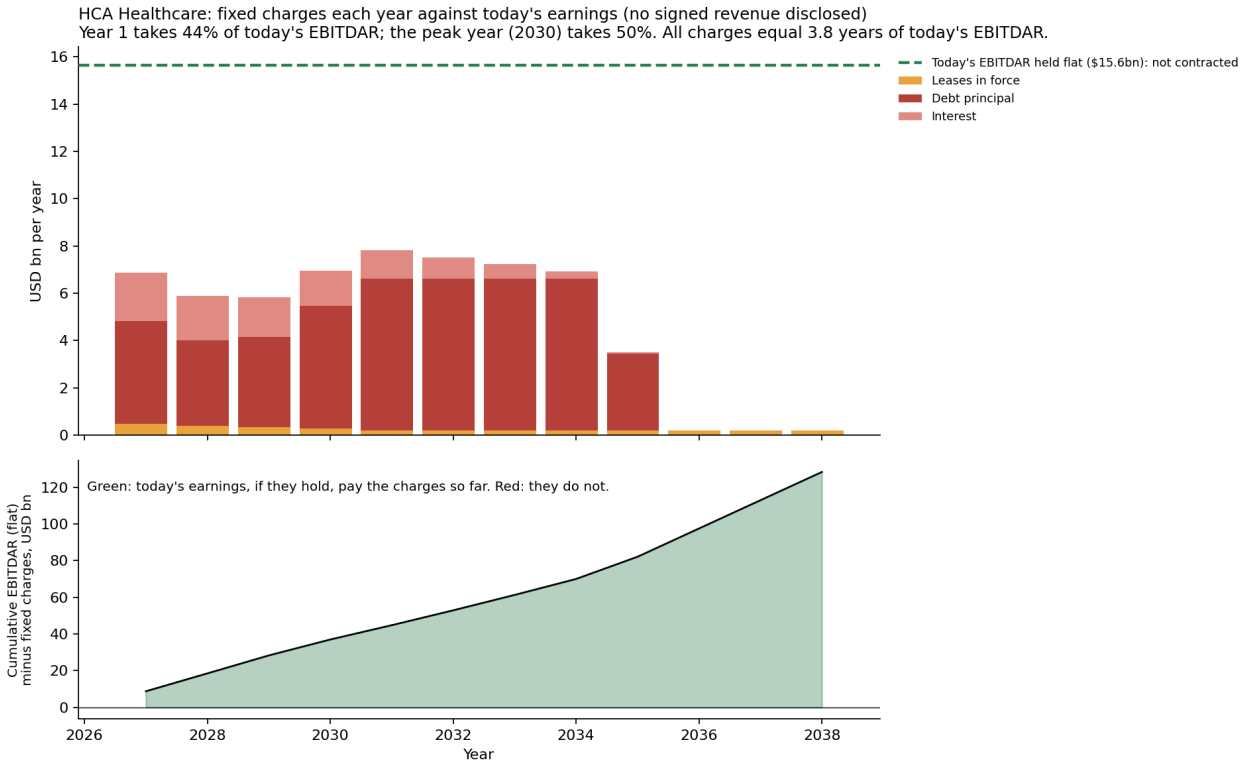

Paths: SPF, FOMC SEP, Treasury forwards, TRACE HY level. v0 rules for fair spread, PD, refi access: docs/decisions/2026-10-22-issuer-scenario-defaults.md

Path	Prob.	Lev. 4q	Peak lev. (down)	F4 score	Wall risk	Refi fails	PD 12m	Alpha (bp/yr)
soft landing	86%	3.1x	4.3x	3	0%	0%	0.9%	+3
recession	2%	3.2x	4.4x	2	0%	0%	2.4%	+10
higher for longer	8%	3.1x	4.3x	3	0%	0%	1.1%	+4
disinflation rally	4%	3.1x	4.2x	3	0%	0%	0.7%	+3
stagflation	0%	3.2x	4.4x	2	0%	0%	2.5%	+10

- **Weighted expected alpha**, hedged 5-year bond, 6-month horizon: +4 bp a year before cost, -170 bp after a 20 bp bid-ask round trip. Framework F9 G3 (alpha after cost above zero): fails.
- **Inputs**: archetype A6; 5-year spread 136 bp against a fair 135 bp (pair report fair line); starting growth 5.0% a quarter; 17,355 of 125,337 (USD m) of debt due inside 8 quarters. F4 points held on every path: rating proxy.
- **Read with care**: fair spread, default probability, and refinance access follow the v0 rules of `docs/decisions/2026-10-22-issuer-scenario-defaults.md`. Under spread-proportional pricing a mispricing scales with the market, so the stress paths enlarge it; real stress often widens a gap before it closes.

3 HCA Healthcare (HCA), filing of 2026-06-30

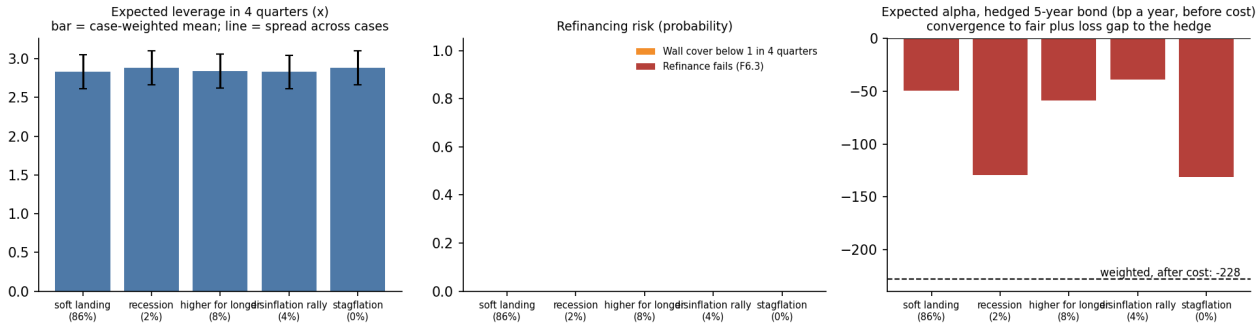

Source: HCA Healthcare SEC filings as of 2026-06-30 (XBRL); EBITDA from the point-in-time loader; hy/clocks.py.

- **Fixed charges:** $59bn, centred on year 4.4. That is 3.8 years of today's EBITDAR.
- **No contract clock** (no signed revenue disclosed). The green line is today's EBITDAR held flat, not a contract.
- **Debt schedule:** ladder short of balance-sheet debt by 32,038; residual put in 'thereafter'; balance-sheet debt 45,828 (tag LongTermDebt).

HCA Healthcare (HCA): scenarios under each macro path

HCA Healthcare (HCA) under each macro path; archetype A2, phase expansion

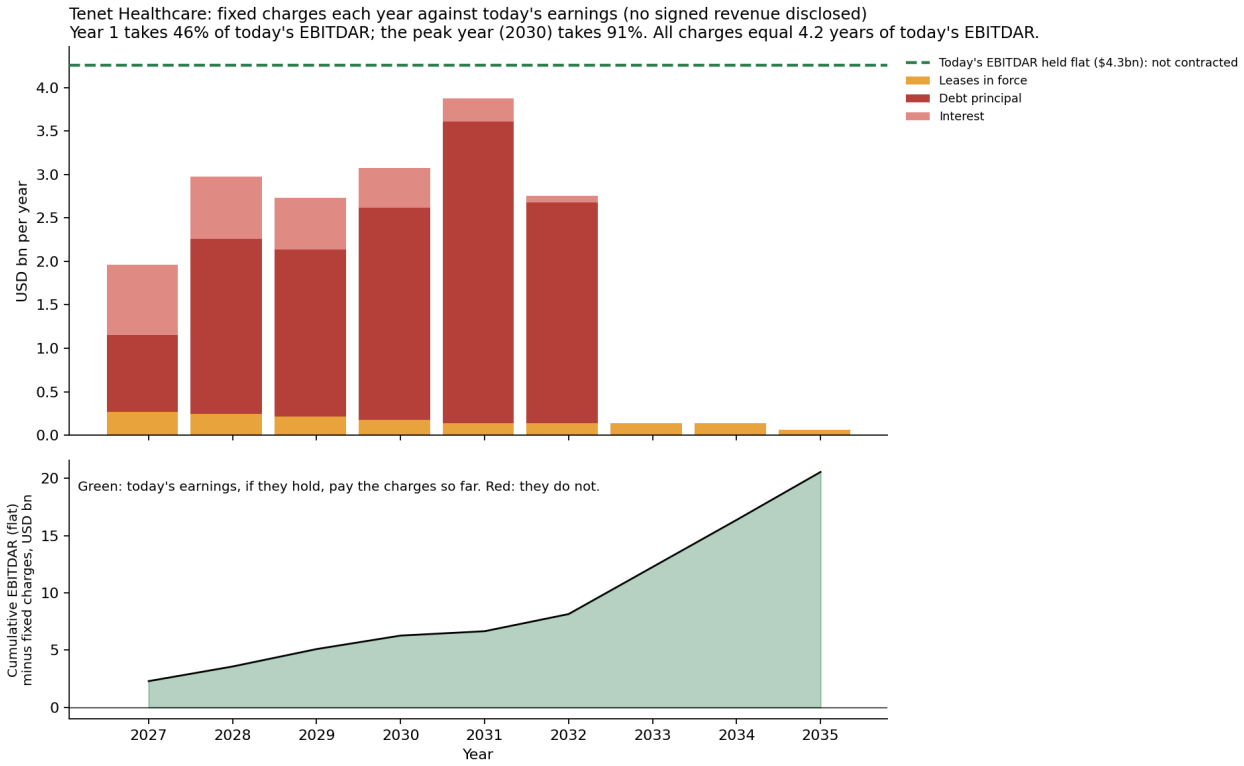

Paths: SPF, FOMC SEP, Treasury forwards, TRACE HY level. v0 rules for fair spread, PD, refi access: docs/decisions/2026-10-22-issuer-scenario-defaults.md

Path	Prob.	Lev. 4q	Peak lev. (down)	F4 score	Wall risk	Refi fails	PD 12m	Alpha (bp/yr)
soft landing	86%	2.8x	3.9x	4	0%	0%	0.6%	-50
recession	2%	2.9x	4.0x	3	0%	0%	1.6%	-129
higher for longer	8%	2.8x	3.9x	4	0%	0%	0.7%	-59
disinflation rally	4%	2.8x	3.9x	4	0%	0%	0.5%	-39
stagflation	0%	2.9x	4.0x	3	0%	0%	1.6%	-131

- **Weighted expected alpha**, hedged 5-year bond, 6-month horizon: -52 bp a year before cost, -228 bp after a 20 bp bid-ask round trip. Framework F9 G3 (alpha after cost above zero): fails.
- **Inputs**: archetype A2; 5-year spread 68 bp against a fair 88 bp (pair report fair line); starting growth 1.6% a quarter; 6,192 of 45,828 (USD m) of debt due inside 8 quarters. F4 points held on every path: rating proxy, recent raise.
- **Read with care**: fair spread, default probability, and refinance access follow the v0 rules of `docs/decisions/2026-10-22-issuer-scenario-defaults.md`. Under spread-proportional pricing a mispricing scales with the market, so the stress paths enlarge it; real stress often widens a gap before it closes.

4 Tenet Healthcare (THC), filing of 2026-06-30

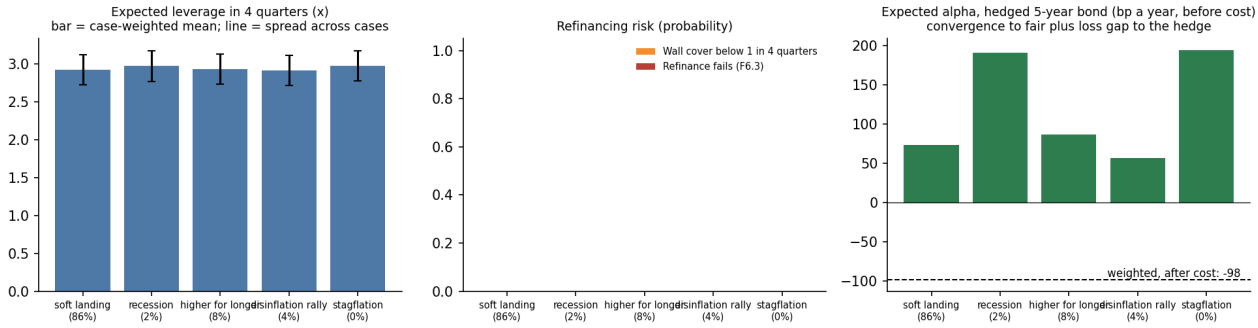

Source: Tenet Healthcare SEC filings as of 2026-06-30 (XBRL); EBITDA from the point-in-time loader; hy/clocks.py.

- **Fixed charges:** $18bn, centred on year 3.3. That is 4.2 years of today's EBITDAR.
- **No contract clock** (signed revenue under one year of sales). The green line is today's EBITDAR held flat, not a contract.
- **Debt schedule:** ladder as filed; balance-sheet debt 13,248 (tag DebtAndCapitalLeaseObligations).
